

APPARATUS AND METHOD FOR SHARED NETWORK

ABSTRACT OF THE DISCLOSURE

5       An apparatus and method support user devices (109-113) and multiple core  
networks (125, 126) with a shared network. A rule set for a user device is associated  
with a core network (125, 126). Access information associated with a shared network  
is converted to core network behaviors using the rule set. A network element (400)  
can be employed to map the shared network information to core network information  
using the rule set for network uses.
